

# AgriProfit\$ Cost & Returns Profiles

## Dryland Herbicide Tolerant Canola (All)

### Grey-Wooded (Peace) Soils

16-July-12

**A**griProfit\$ Cost & Returns Profiles give an insight into the productive and economic performance of Alberta cereal, oilseed, forage and grazing crops, reported by soil or grass-type zone.

This benchmark includes *AgriProfit\$* crop observations from the period of 2008 – 2010. Averaging over a 3 year span smoothes out extremes in prices, yields and expenses. This gives a better reflection of the crops' average unit

production costs and profit potential.

Regional average performance for the crop is compared to a "top third"

management group. Fields included in the top management group are drawn from the lowest cost third, as rated by total production cost per unit of output for that crop, in that area, for each of the years.

The 3-year summary table, and a range of frequency charts (over) highlight field level variability in key cost and returns tallies. This emphasizes further the need for producers to know and use their own crop unit costs in managing their businesses.
