1 INTRODUCTION

This document details the information and processes used to update the approved 2002 land base with recent disturbances. Also the yield relationships that will be used in the timber supply analysis are described.

Inventory updates were not completed for the MPB strategy. The AVI inventory used is currently approved under the 2002 FMP.

2 BACKGROUND

2.1 Land Base Classification

Since the approval of the Forest Management Plan (FMP) in 2002, Slave Lake Pulp and other embedded operators have completed an update to the land base classification and redefined the AAC land base to be used in the MPB strategy. A revision to the land base has been completed as newer information has become available. The AAC contributing land base has been increased by 0.74% from 435,379 ha to 438,593 ha. A land base designation of one land base is used as defined in the 2002 FMP. Table 6 and Table 7 provide summary comparisons.

Updates to the land base since 2002 include the following information sources:

- Mountain Pine Beetle Susceptibility Rank
- Harvest information since the FMP approval
- Land Use information
- Fire Information
- Grizzly Bear management units
- Swans Hills Buffer

The following provides the detail in how the update information is incorporated into the revised land base. Table 1 provides information for the layers used.

The land base classification will be completed for the Forest Management Unit S20.

Table 1 Update Layer Information

Coverage	Reference Date	Scale of Accuracy	Projection	Datum	Zunits	Units	Spheriod	Source
Harvested Blocks	15-Nov-08	1:5,000	UTM 11	NAD83	No	Meters	GRS1980	Slave Lake Pulp, Millar Western, Vanderwell, Buchanan
Planned Blocks	12-Feb-09	1:5,000	UTM 11	NAD83	No	Meters	GRS1980	Slave Lake Pulp, Millar Western, Vanderwell
Fires	1-May-08	1:5,000	UTM 11	NAD83	No	Meters	GRS1980	Sustainable Resource Development

	23-Sep-08	1:20000	UTM 11	NAD83	No	Meters	GRS1980	Sustainable Resource Development

2.1.1 MOUNTAIN PINE BEETLE

Section 7 of the Interpretive Bulletin *Planning Mountain Pine Beetle Response Operations* states that it is Alberta's goal to alter the current age-class structure of susceptible pine forests thereby increasing their resistance to Mountain Pine Beetle (MPB). The initiative requires that Forest Management Plans (FMP) be amended to address the MPB issue. Further, the directive indicates two key targets:

The new or amended Pine Strategy FMPs must be completed by May 1, 2009.

The goal is to reduce the area of susceptible pine in the Rank 1 and Rank 2 categories to 25% of that projected in the currently approved FMP at a point twenty years into the future.

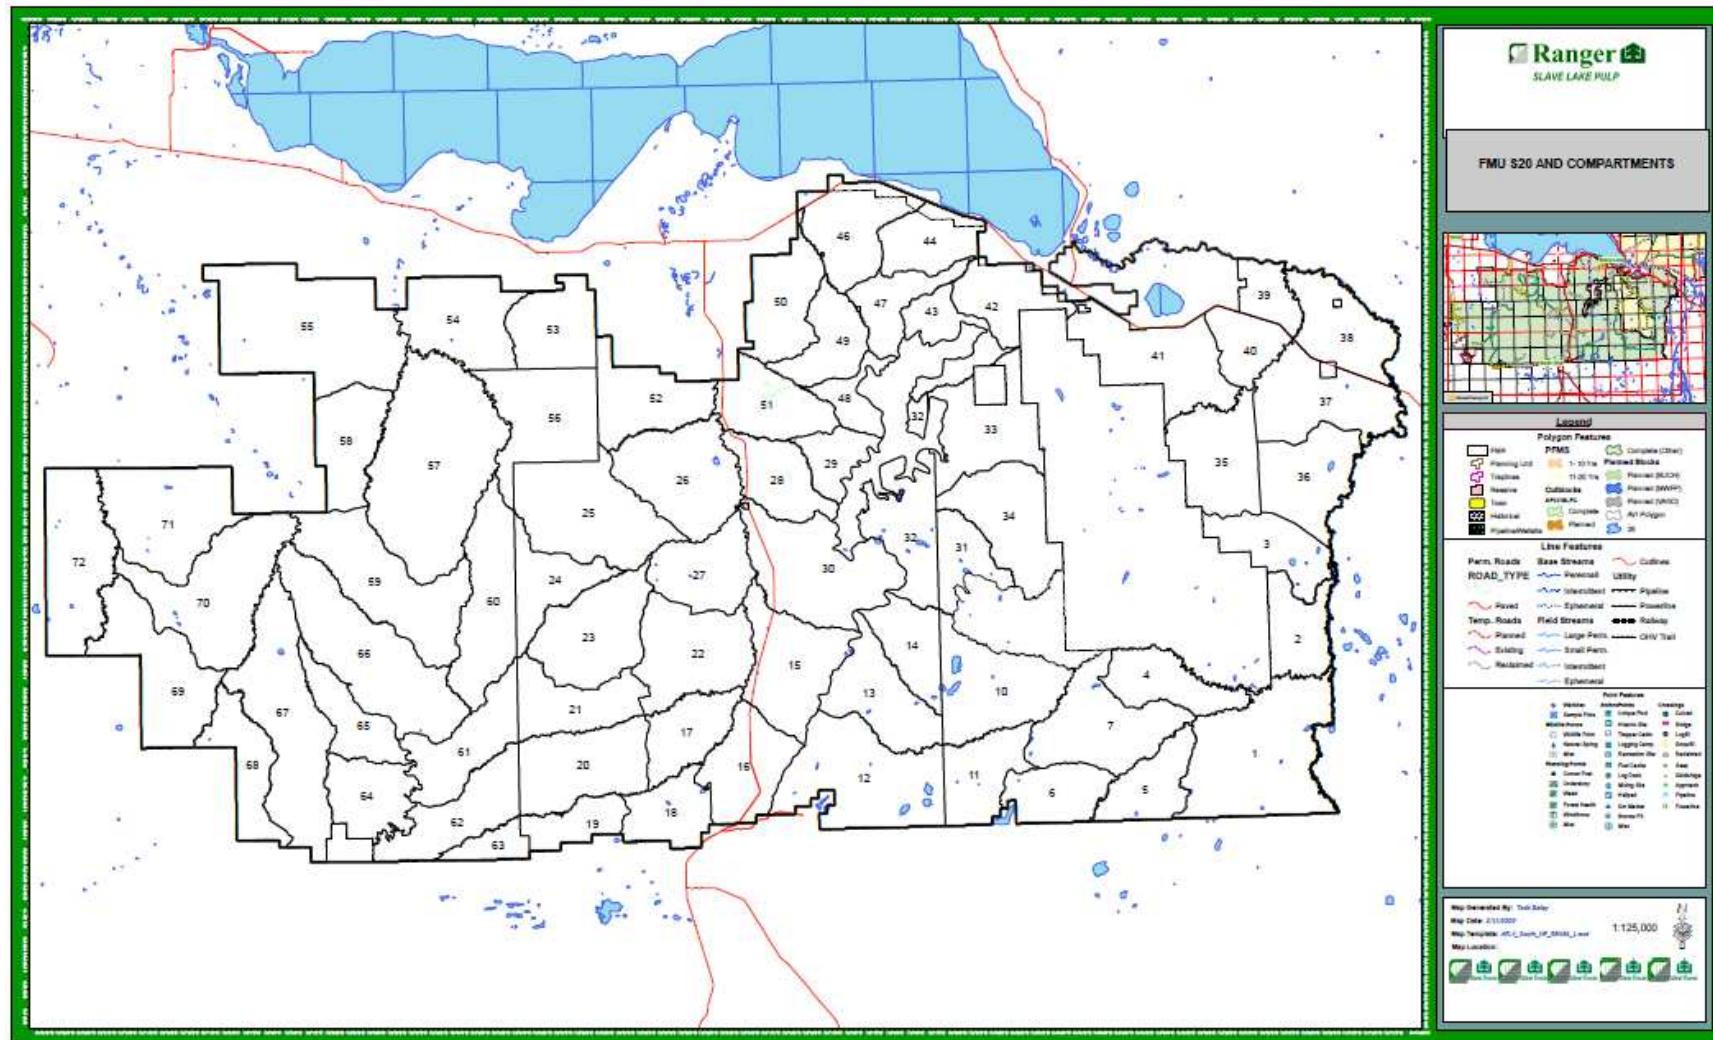

While attempting to form an operational plan from the current ASRD susceptibility model and the resulting Rank 1 and Rank 2 identified stands, it was discovered that the model was selecting stands that contained very little pine. As a result an alternative system to prioritize stands for harvest was selected. The following priority ranking system will be incorporated into the TSA.

- Priority 1 >= 70% pine
- Priority 2 40%-60% pine
- Priority 3 <= 30% pine
- Priority 4 no pine

Although an alternative priority ranking system will be used to select stands within the TSA and resulting SHS, a summary of ASRD ranking system will be included in the final FMP amendment document. An additional comparison of baseline, Preferred Forest Management Strategy (PFMS) and ASRD's 75% reduction of Rank 1 and 2 strategy will be included.

The S20 FMU is currently at the leading edge of the MPB infestation in the province and has a significant proportion of its productive forest in susceptible pine Rank 1 and Rank 2 stands.

Figure 1 FMU S20 and Compartments

2.1.2 HARVEST INFORMATION

Two coverages are created to contain harvest information and are used to update the land base. These include historical harvests from 2002 to 2008 and areas to be harvested in the first period of the SHS.

Harvest information since the FMP approval was collected for all operators. This includes Slave Lake Pulp Corporation (SLPC), Millar Western Industries (WEST), Buchanan Lumber (BUCH), Vanderwell (VAND) and SRD – MTU Program (MTU).

One layer of this information was created to facilitate the land base update. In creation of this layer it was noted that some blocks from different operators overlapped each other.

To ensure that only one opening number/operator was assigned to each block the following decision rules were adopted for the overlaps. In all cases blocks overlapped with SLPC's. No cases were found where other operators overlapped with each other.

If SLPC's opening number is not missing then the operator is assigned as 'SLPC', SLPC's harvest year and Regeneration Standard are assigned to the overlap area.

If MW and SLPC Blocks overlap and MW's Harvest Year is greater than SLPC's harvest year then the operator is assigned 'WEST' and MW's Harvest Year and Regeneration Standard are applied to the overlap area, otherwise the operator is assigned 'SLPC' and SLPC's harvest year and declaration are assigned to the block.

If VAND and SLPC Blocks overlap and VAND's Harvest Year is greater than SLP's harvest year then the operator is assigned 'VAND' and VAND's Harvest Year and Regeneration Standard are applied to the overlap area, otherwise the operator is assigned 'SLPC' and SLP's harvest year and declaration are assigned to the block

If BUCH and SLPC Blocks overlap and BUCH's Harvest Year is greater than SLP's harvest year then the operator is assigned 'BUCH' and BUCH's Harvest Year and Regeneration Standard are applied to the overlap area, otherwise the operator is assigned 'SLPC' and SLP's harvest year and declaration are assigned to the block

If MTU and SLPC Blocks overlap and MTU's Harvest Year is greater than SLPC's harvest year then the operator is assigned 'MTU' and MTU's Harvest Year and Regeneration Standard are applied to the overlap area, otherwise the operator is assigned 'SLPC' and SLPC's harvest year and declaration are assigned to the block

There are 150.5 ha of overlap area of the total of 45,855 ha of harvested blocks (0.32%). Appendix 2 provides a detailed summary of the changes applied.

ARIS block declarations have been assigned to each harvested block. In some cases where the declarations have changed because of the block overlaps, the yield curve reference has also changed.

Table 2 provides the default yield class assignments.

Ages were set to 2008 less the assigned harvest year.

Original land base codes were maintained.

MPB Ranks are set to 0

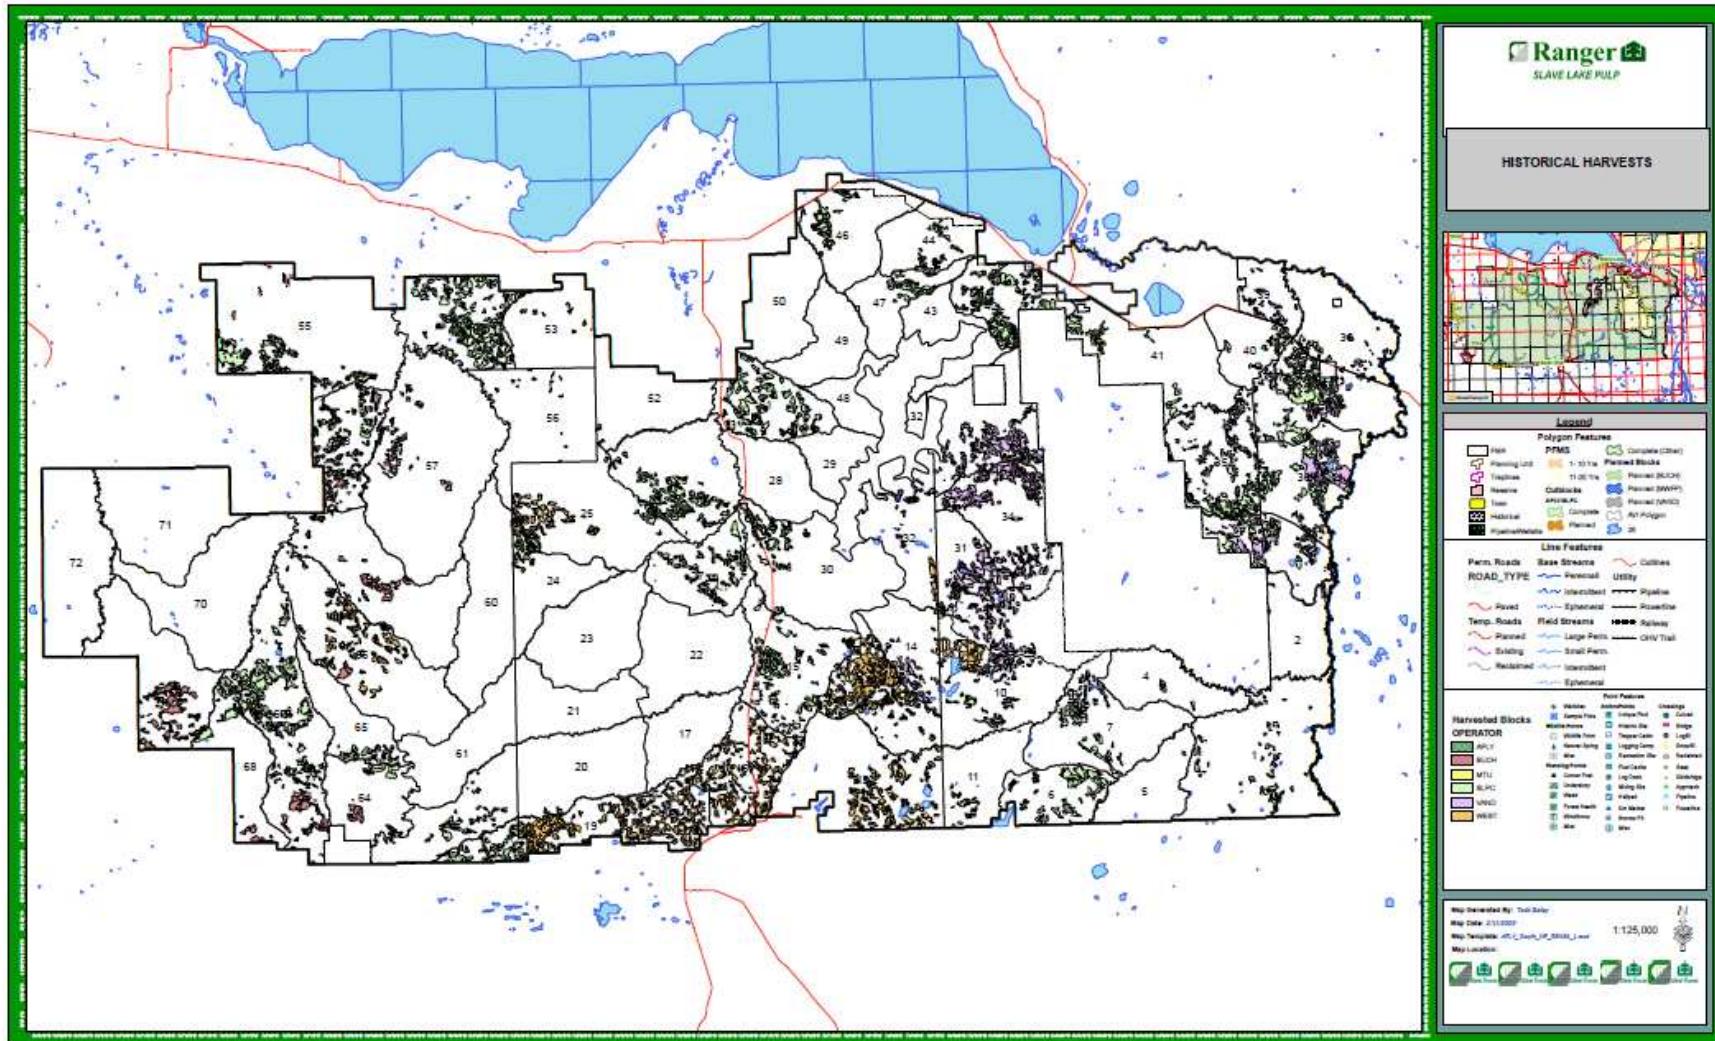

A land base code of 208 is used to designate the harvested blocks that contribute to the active land base.

Transitional yields curves are assumed for the harvested blocks as per the 2002 FMP.

Figure 2 Historical Harvests

2.1.2.1 Harvested Blocks with Silviculture Liability Waived

Fire salvage operations have taken place within the S20 FMU since the submission of the 2002 FMP. Silviculture liabilities have been waived for these blocks.

Therefore, this land base is classified as passive. Appendix 3 provides a list of blocks and operators. A land base code of 211 is assigned to this classification.

2.1.2.2 Planned Harvests

Planned harvest areas were obtained from Slave Lake Pulp Corporation, Alberta Plywood Ltd, Millar Western Forest Products Ltd, Vanderwell Contractors (1971) Ltd and Buchanan Lumber. Land base classifications are reassigned to active unless the original and updated land base classification are for land use, and the block liability has not been waived. A land base code of 210 is assigned to designate blocks within the active land base, and a land base code of 209 is assigned to designate those portions of the planned blocks that were previously assigned to the passive land base, but are now assigned to the active land base.

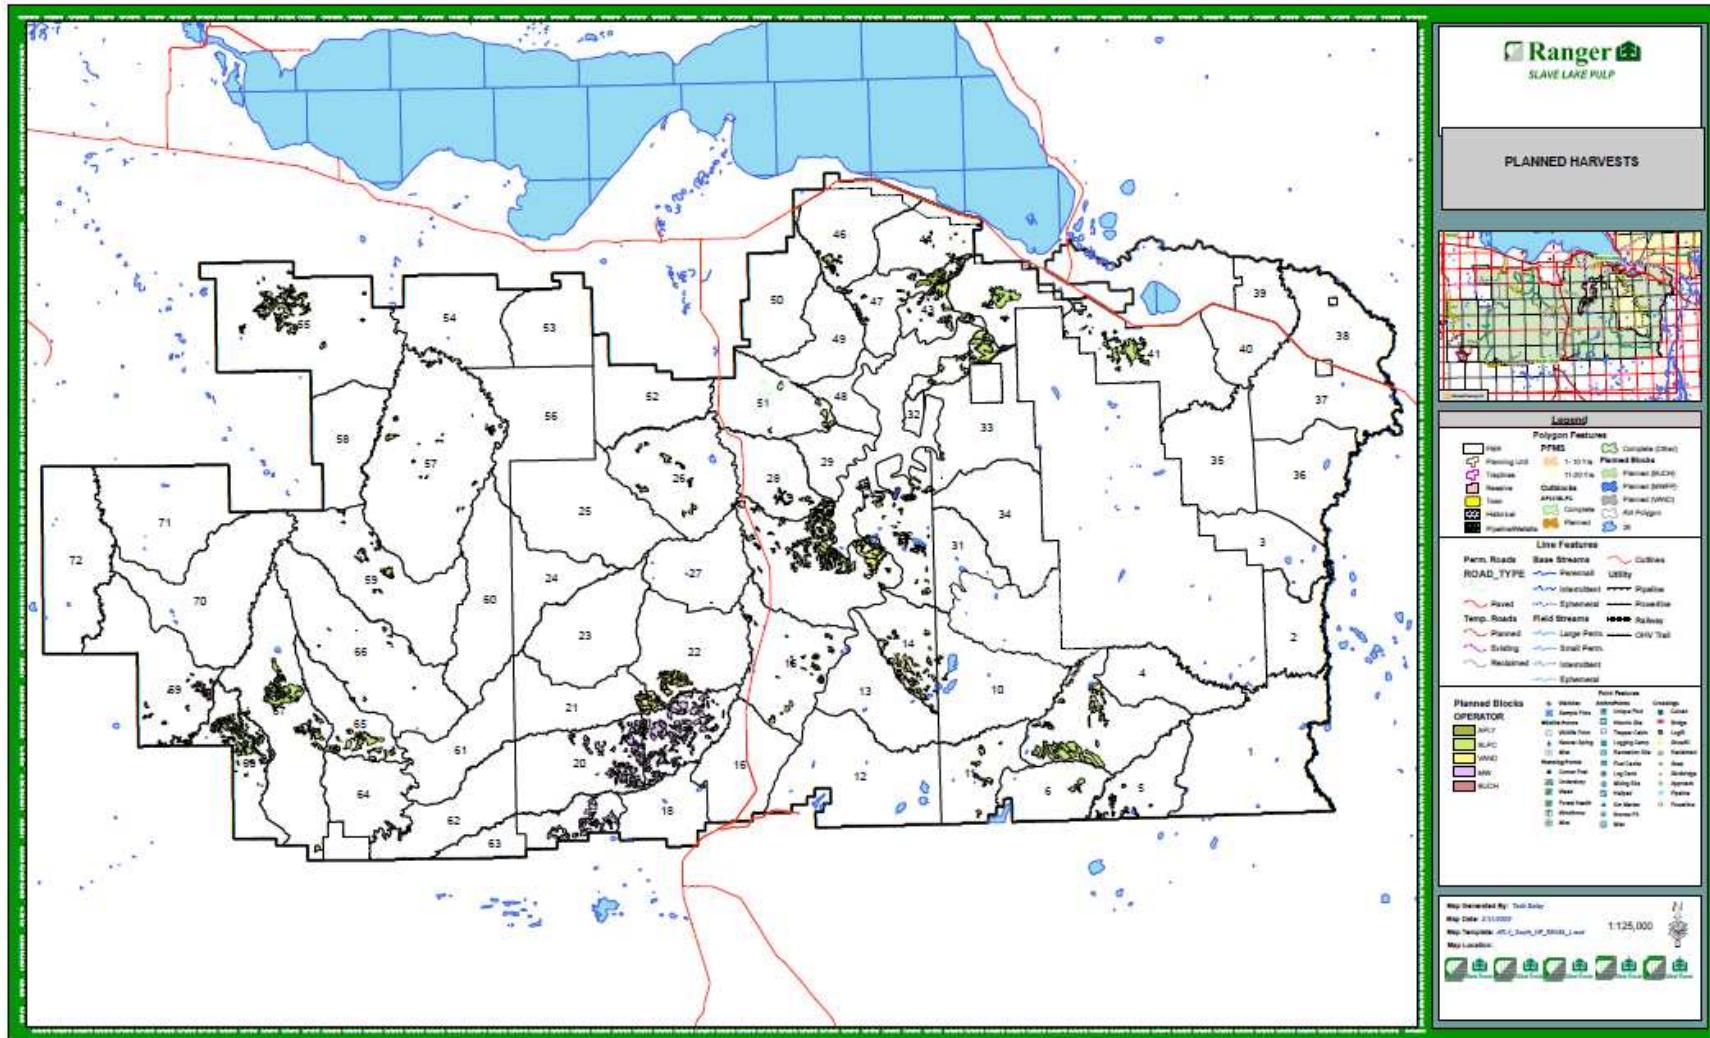

Some portions of planned blocks are not assigned a yield class in the 2002 land base classification. In these instances the dominant yield class of the planned block is assigned.

Some portions of the blocks have an age that is less than the minimum harvest age. In these instances:

- The age is set to 50 if the dominant yield class has a pure deciduous cover group
- The age is set to 70 if the dominant yield class has a pure coniferous, coniferous/deciduous or deciduous/coniferous cover group.

74 ha and 208 ha of a total of 10,533 ha have a yield class and an age reclassification, respectively. Appendix 4 provides a detailed summary by block.

Figure 3 Planned Harvests

2.1.3 LAND USE INFORMATION

The land use layer provided does not allow the ability to differentiate whether a disposition is planned or as-built. Within the S20 FMU, this area amounts to approximately 1,500 ha. The inability to define these dispositions as such will not allow for development of an accurate spatial harvest sequence. Therefore, no deletions for land use were completed.

2.1.4 NON-SALVAGEABLE BURNS (AFTER 2002)

An updated fire layer was provided by ASRD (Website). Fires are selected if the burn Fire Year > 2002 and BurnCode <> 'I'. Table 3 provides a list of the fires. The ages were recalculated as 2008 less the fire year. Yield class assignments remain unchanged and the land base code is set to 108. The MPB rank is set to 0.

Table 3 Update Fires

Fire Number	Year	FireSize
SWF-076-2007	2007	1.5
SWF-114-2003	2003	9.3
SWF-130-2003	2003	4.0
SWF-151-2006	2006	1,786.0

2.1.5 GRIZZLY BEAR UNITS AND SWAN HILLS SPHERE OF INTEREST INFORMATION

The Land base classification includes a designation to the current Grizzly Bear Management unit and the area within the 35km of the town site of Swan Hills.

2.1.6 OTHER LAND BASE CLASSIFICATIONS

Criteria are applied to stands to account for other land base reporting. These are not applied to harvested areas. Each classification is assigned a code to facilitate reporting.

YC_SP = SB and SP1 = SB and Height <= 14 (land base code 201)

YC_SP = SB and SP1 = SB and Crown = A (land base code 202)

YC_SP = SB and SP1 = SB and LT in Overstory (land base code 203)

SP1 = SB and Crown = A (land base code 204)

SP1 = SB and LT >= 20% (land base code 205)

SP1 = LT (land base code 206)

A Density <= 14m Understory (land base code 207)

Table 4 provides the order in which the land base code assignments are made.

Table 4 Land base Code Assignment Hierarchy

Step	Criteria	Land Base Code Assigned
1 Fire Deletions	If the area was burned after 2001	108
2 Update Harvest Information	If the area was harvested after 2001, the area was not burned after 2001, Silviculture Liability assumed and the previous Land base code did not designate as an Excluded disposition.	208
3 Update Block Liabilities	If the area was harvested after 2001, the area was not burned after 2001, Silviculture Liability is not assumed and the 2002 Land base code did not designate as an Excluded disposition.	211
4 Update other land base classifications	If the polygon is designated as Passive area in the 2002 land base classification and the polygon was not deleted for fire or waived silviculture liability and was not assigned to a harvest block or a planned block.	201,202,203,204,205,206,207
5 Identify Planned Blocks	If the polygon was part of the provided planned block layer and the 2002 land base code is not designated as an excluded disposition	210
6 Identify Previous Passive areas within Planned Blocks	If the polygon is a planned block and the	209

2.1.8 PROCESSING

A layer is created that contains all the above updates. This was intersected with the approved land base and the ages, yield class assignments and land base classification codes updated. Table 6 and Table 7 provide the Original and Updated land base summaries respectively. In summary, the net contributing land base has increased by 0.74% from 435,379 ha to 438,593 ha

The summary in Table 7 was completed using the following criteria:

Select where FMU2008 = S1 or S1S or S2 or S2S or S6 or S6S

Group the information on FMU2008 and LBDeletion2008

Total the area in AREAHA2008.

Changes to the 2002 FMP land base are as follows:

Total active land base has increased by 3,209 ha (0.74%) from 435,379 ha to 438,593 ha

2002 land base deletion for water and excluded dispositions remain unchanged

Remaining 2002 land base deletions decreased in area. This area reduction is reflected in the 2008 land base codes (108 to 211).

The largest 2002 land base deletion decrease occurred in the Non-Salvageable Burns (Chisholm) category. Some of this are reclassified as waived silviculture liability and in harvested blocks.

45,855 ha is classified as harvested blocks, with assumed silviculture liability

There is 13,560 ha of planned blocks defined in the land base. 292 ha of this was previously defined as passive land base.

There are 803 ha of additional burn deletions applied.

2.2 Yield Relationships

The 2002 DFMP yield relationships have not been revised for this amendment. Table 8 provides the 17 yield relationships and their Transitions. Figure 7 provides the area weighted coniferous and deciduous yield relationships. Appendix 3 provided the individual yield relationships.

Table 8 Yield Class and Description

Yield Class	Description	Transition

Long run sustained yield averages (LRSYA) for the FMU have been calculated. Table 9 and Table 10 provides the yield class, transition, net area, maximum mean annual increment culmination age (coniferous and deciduous) and the contribution to LRYSA for standing and regenerated states respectively. LRSYA, Volume and MAI values are net of cull. In addition area weight coniferous/deciduous cull percentages are provided.

Dear George Duffy:

RE: AGREEMENT-IN-PRINCIPLE – SLAVE LAKE PULP MOUNTAIN PINE BEETLE RANKING SYSTEM

Thank you for your October 2, 2008 submission outlining the Slave Lake Pulp (SLP) Mountain Pine Beetle (MPB) ranking system. The Department has reviewed the proposal. Agreement-in-principle is granted to SLP for use of this alternate MPB ranking system in its Detailed Forest Management Plan MPB Amendment.

Upon review, the following observations were made:

1. The SLP MPB ranking system, which combines % pine and merchantability criteria via age, does not use the Alberta Pine Strategy Stand Ranking system other than to narrow down the stands SLP will initially consider. By adopting this approach, the climatic factor influence is disregarded.

In the case of the SLP S20 FMA it appears that the climatic factor does not have as much of an influence on the Pine Strategy Stand Ranking as seen in other FMAs in Alberta. Therefore, the department can see why SLP chose to explore other criteria to refine its priority stands.

.../2

2. The map developed using the SLP MPB ranking system was compared against the SRD MPB Connectivity map (see attached). The areas shown in red and orange on the Connectivity map identify the highest priority stands. In order of priority, the focus should be in the Central portion of the FMA (north of the Moosehorn fire), the Eastern portion of the FMA (west of the Agnes Lake fire) and finally in the Western portion of the FMA (north of the Virginia Hills fire). SLP will need to develop a Spatial Harvest Sequence that focuses harvesting activities in these priority areas over the short-term.
3. The 60 year and 80 year merchantability limit criteria as portrayed on the maps provided by SLP both appear to address the areas of concern to the Department. Appropriate rationale will need to be provided for the merchantability criteria selected.

The Department looks forward to reviewing the SHS as it becomes available to the Plan Development Team to see how the priority areas have been addressed.

If you wish to discuss further, please give me a call at (780) 427-4707.

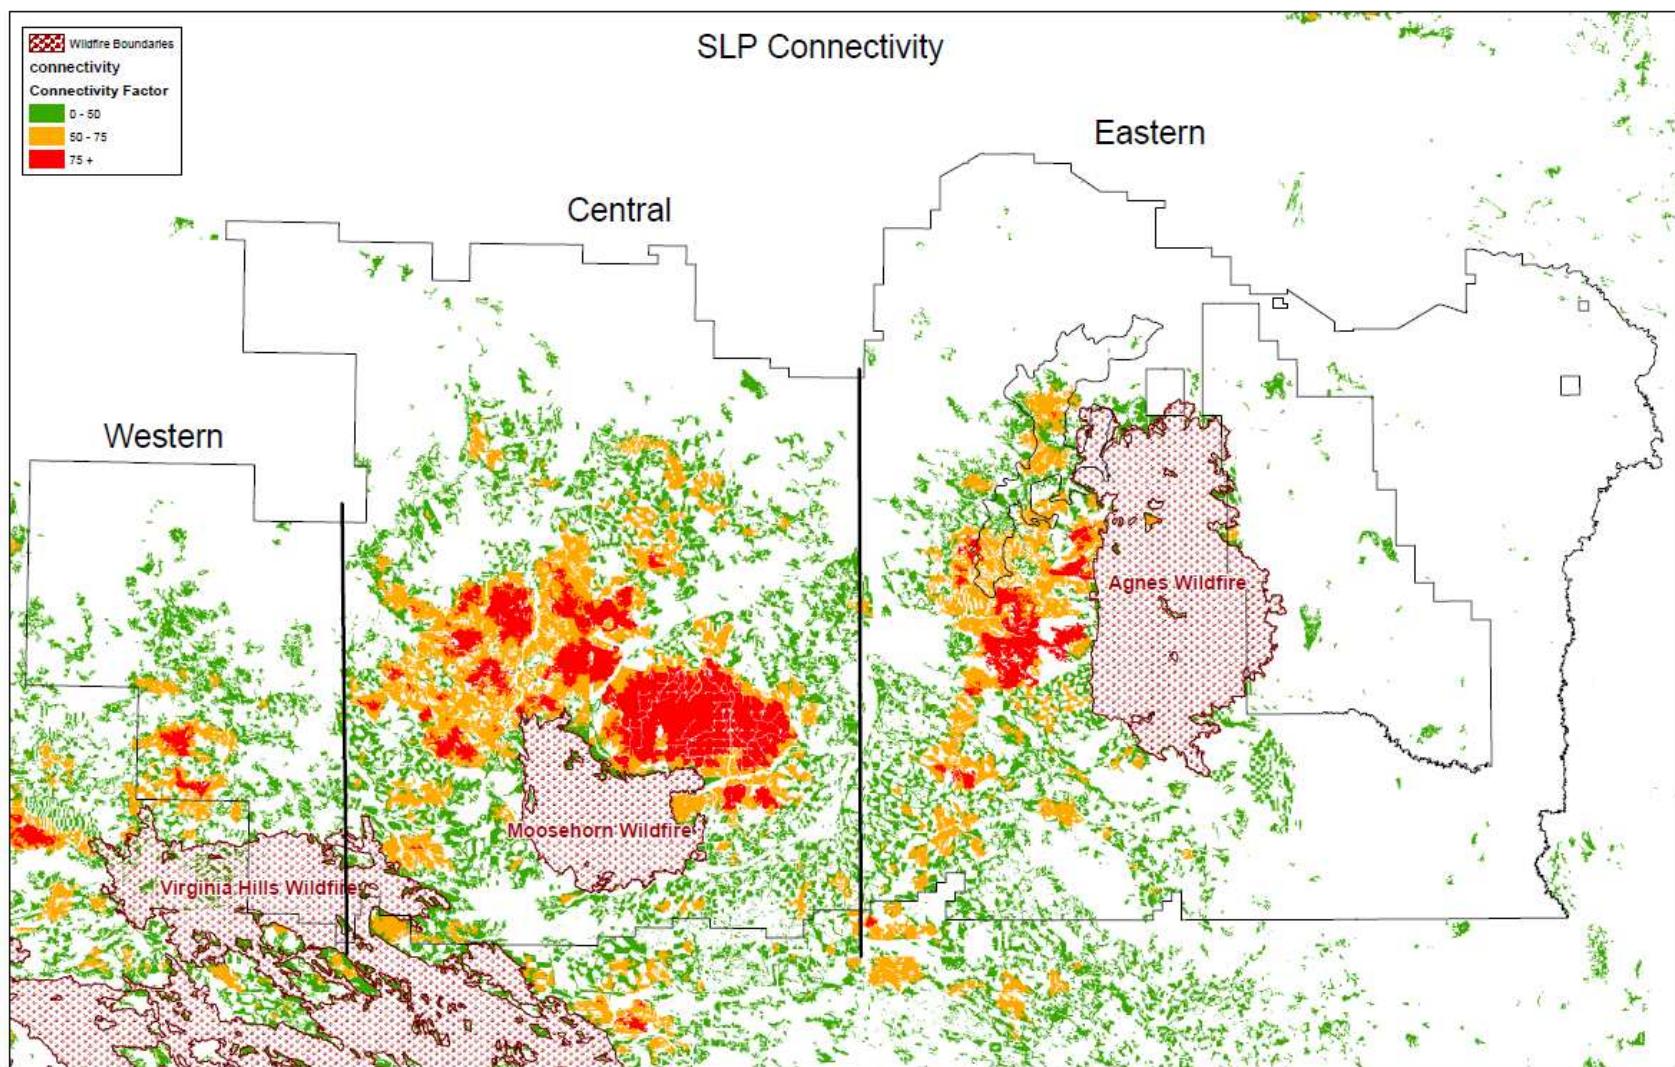

Sincerely,

APPENDIX 6. LAND BASE DATA DICTIONARY

Land Base Coverage Information:

- Name: NewLand_v4
- Number of Records: 633,866
- Software Used: ESRI ArcInfo Version 9.2
- Projection: NAD83 UTM 11
- Tolerance: < 0.00001m

Information from Update Layer:

Column	Data Type	Precision	Width	Decimals	Description
AREA	Numeric	8	8	8	Polygon area (m2)
PERIMETER	Numeric	8	8	8	Polygon perimeter (m)
NEWLAND#	Numeric	8	8	0	Internal ID number
NEWLAND-ID	Numeric	8	8	0	Internal ID number
NEWFMU	Text	0	5	0	Reassigned FMU (S20)
OPENINGNUMBER	Text	0	20	0	Block OpeningNumber (historical harvest)
OPERATOR	Text	0	50	0	Operator assigned to Block (historical harvest)
PREBLOCK	Numeric	8	8	0	Planned Block Designation ('Y','N')
DKEY	Text	0	15	0	Land Use Disposition
FIRENUMBER	Text	0	12	0	Fire Number
ISSH	Numeric	8	8	0	Swan Hills Buffer designation (1 = within, 0 = outside)
GBWU	Numeric	8	8	0	Grizzly Bear Wildlife Units (0 234 235 236 238 239 241 243 245 246 249 250 253)
HABITAT	Text	8	50	0	Grizzly Bear Habitat (Core Secondary None)

Re: Mountain Pine Beetle Action Plan – Net Land Base Update

A review of the updated Net Land Base, developed as part of the Slave Lake Pulp (S20) Amendment for Mountain Pine Beetle, has been completed.

The original land base has been updated to include the following information sources:

- ◆ Mountain Pine Beetle Susceptibility Rank
- ◆ Harvest Information since 2002 FMP approval
- ◆ Land Use Information
- ◆ Fire Information
- ◆ Grizzly Bear Management Units
- ◆ Swan Hills Sphere of Interest

As a Quota holder and member of the Plan Development Team, I understand the updates to the land classification and AAC land base to be used in the Mountain Pine Beetle strategy.

Keith Branting

Dear Todd,

Re: Mountain Pine Beetle Action Plan – Net Land Base Update

Millar Western's review of the updated Net Land Base as developed for the Slave Lake Pulp (S20) Amendment for Mountain Pine Beetle, has been completed.

Our understanding is the original land base has been updated to include the following information sources:

- ◆ Mountain Pine Beetle Susceptibility Rank
- ◆ Harvest Information since 2002 FMP approval
- ◆ Land Use Information
- ◆ Fire Information
- ◆ Grizzly Bear Management Units
- ◆ Swan Hills Sphere of Interest

As a Quota holder and member of the Plan Development Team, I understand the updates to the land classification and AAC land base to be used in the Mountain Pine Beetle strategy.

Sincerely,

Ray Hills
