

of changes in aquatic resources over time, and to make recommendations for future monitoring programs. To meet the overall objectives, biological diversity of benthic macroinvertebrates, presence or absence of sport fish, stream habitat measurements and stream classification, and temporal patterns in selected physicochemical characteristics of surface water data were collected, analyzed, and where appropriate compared.

#### *Fish*

Given the variability and number of streams within Spray Lake Sawmills harvest planning area, a wide range of fish species could potentially be present during part or all of a year. The most likely sport fish found in this area could include rocky mountain whitefish (*Prosopium williamsoni* - Girard), brook trout (*Salvelinus fontinalis* - Mitchell), brown trout (*Salmo trutta* - Linnaeus), bull trout (*Salvelinus confluentus* - Suckley), rainbow trout (*Oncorhynchus mykiss* - Walbaum), cutthroat trout (*Oncorhynchus clarki* - Richardson) and burbot (*Lota lota* - Linnaeus). Numerous other non-sport fish species will also be present.

Spray Lake Sawmills collected sport fish information from 12 streams (Fish Creek, Fisher Creek, McLean Creek, Quirk Creek, Silvester Creek, Prairie Creek, Etherington Creek, Lost Creek, Wilkinson Creek, Cataract Creek, McPhail Creek, and Baril Creek) within their planning area (Wicklum and Scrimgeour 1997; and Townsend 2000a, 2000b, 2001a, 2001b, 2002a, 2002b, 2003a, 2003b, 2004a, and 2004b). Sport fish identified in these studies include brook trout (*Salvelinus fontinalis* - Mitchell), bull trout (*Salvelinus confluentus* - Suckley), rainbow trout (*Oncorhynchus mykiss* - Walbaum), and cutthroat trout (*Oncorhynchus clarki* - Richardson).

Figure 2.21

## 2.19 Forest Health

Forest health is a term used to describe the condition of a forest and how well the forest is able to meet management objectives. Healthy forests provide for many of society's social, economic and environmental values. (ASRD, 2003) The focus of this section is on the health of the trees in terms of insects and diseases and on the health of the vegetation in terms of invasive/noxious plant species.

Insects and diseases can affect trees by causing mortality or significantly reducing tree growth. Forest pests in Alberta are grouped into five categories according to the *Alberta Forest Health Strategy and Shared Roles and Responsibilities Between SRD and the Forest Industry – SRD 2003*). These categories are:

- Category A – Pests federally regulated under the Plant Protection Act
- Category B – Pests that can kill a tree within a year
- Category C – Major Defoliators
- Category D – Pests that cause chronic diseases and disorders
- Category E – Pests of young trees

The primary agents in the FMA are:

- Mountain Pine Beetle (Category B) - This is a very destructive beetle that bores through the bark of mature pine trees in the late summer or early fall establishing itself under the bark resulting in the rapid death (within 1 year) of the tree. The Mountain Pine beetle, once established, is very difficult to control and can devastate the forest. Lumber quality is also affected due to subsequent development of blue stain in the wood.
- Dwarf Mistletoe (Category D) - It is a parasitic plant that causes branches to swell and deform. Sometimes this results in masses of foliar growth called "witches brooms" at the point of infection. This plant can severely reduce tree growth and will eventually kill the tree.
- Western Gall Rust (Category E) - Is a fungus that causes a localized swelling "gall" to develop on the branches and stems of pine trees. These galls can vary in size. Stem galls are more crucial to the survival of the tree than branch galls.
- Armillaria Root Rot (Category D) - Trees infested with this fungus may not show external symptoms. A fan shaped mass of fungal hyphae may be present under the bark on the upper part of the roots or the lower stem. Dying trees will have needles dropping off - in pine the needles turn yellow then red, in spruce the needles will turn dull green. The disease usually kills trees in irregular patches. Patches grow bigger over time.
- Atropellis Canker of Pine (Category D) - This fungus causes sunken elongated scars on the stem of the tree. These cankers will have sap bleeding from them and will be spread throughout the stand. They cause a blue-black discolouration of the wood and can lead to poor stem form or breakage.

Invasive weeds can alter the ecosystem's natural processes and displace native vegetation. For these reasons, forest companies are expected to assist in managing weeds in the forested area of Alberta. (ASRD 2001) Restricted or noxious weeds are listed in the Alberta Weed Regulation and include plants such as knapweed (various species), Canada thistle, scentless chamomile and tall buttercup.

## 2.20 Other Industrial Users

The area covered by the FMA has a long-standing history of timber harvesting, which includes SLS activity dating back to 1943. The FMA is also used by a number of different industrial

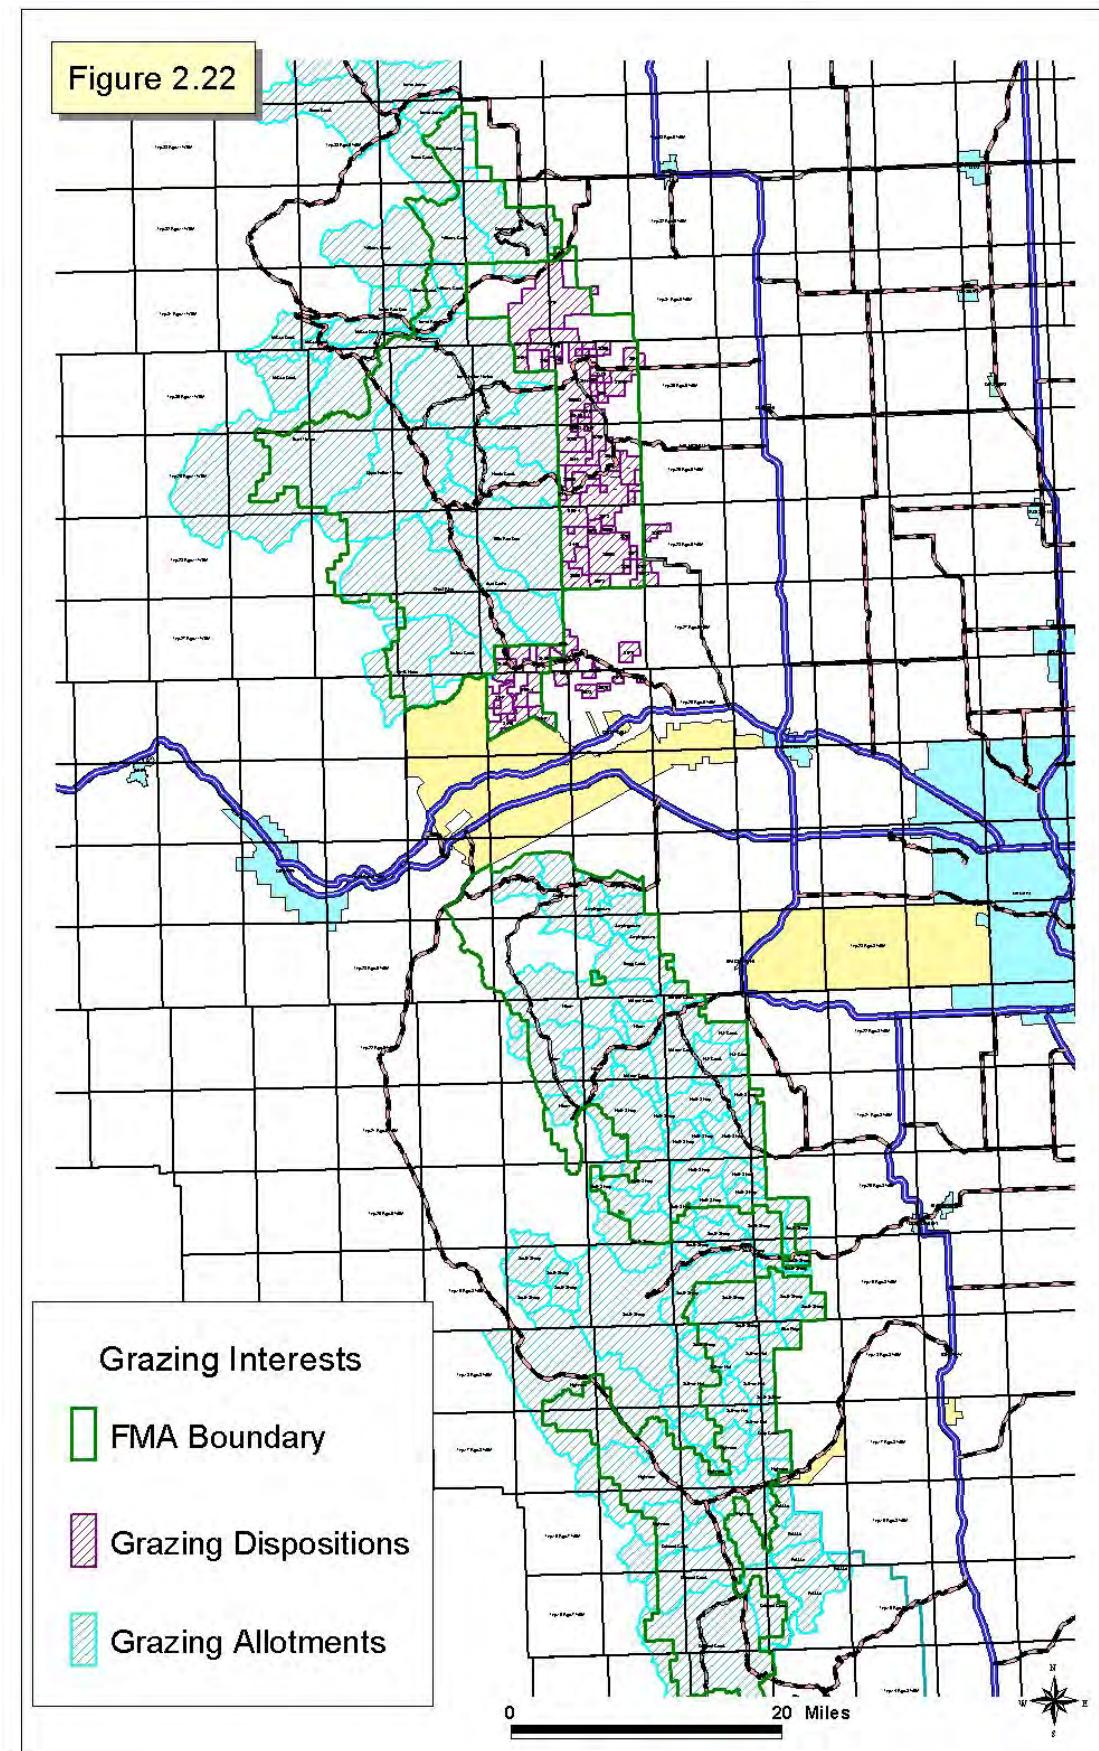

users as defined and managed under the Integrated Resource Plans. They include other timber harvesting operations (Community Timber Use Program), trapping, grazing and the energy/utility industry.

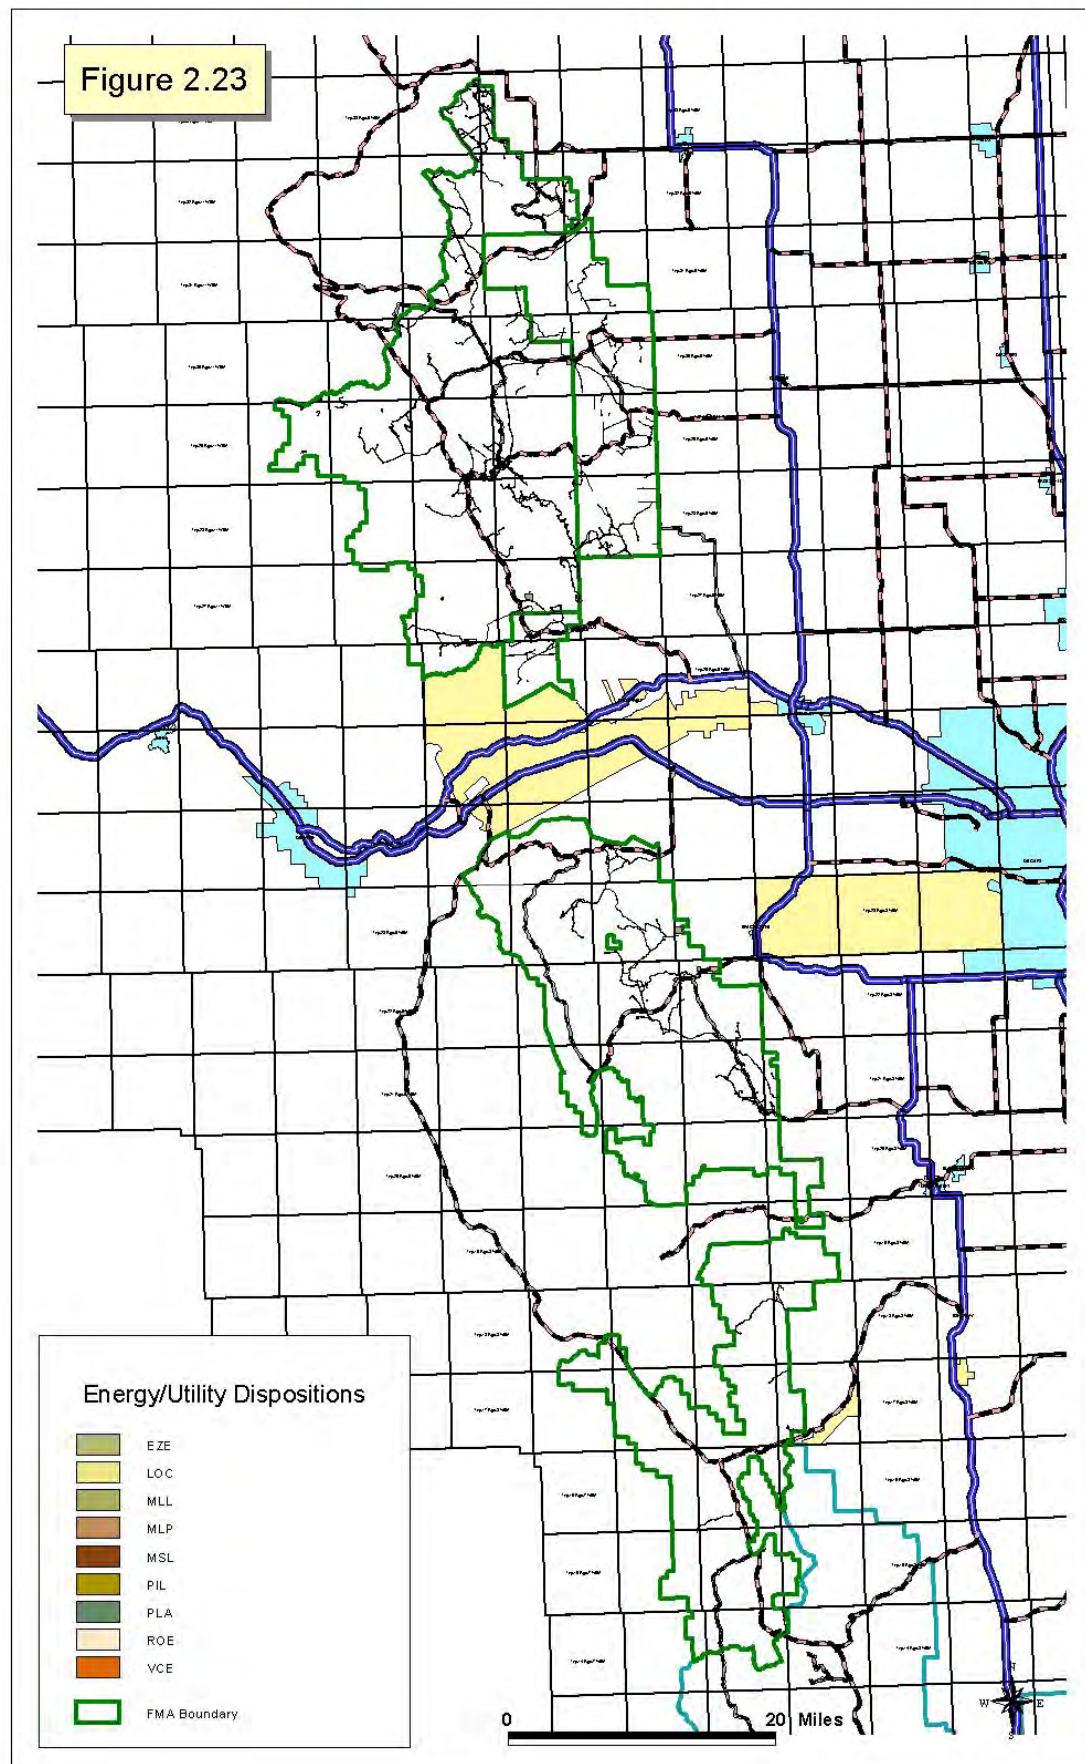

A fixed volume of 36,100m<sup>3</sup> annually is available to the Community Timber Program under the terms of the FMA. The Community Timber Program includes 5 small quota holders (converted from commercial timber permit holders since 2004 DFMP submission), 1 commercial timber permit holder and the “Open” category administered by SRD. Sundre Forest Products has the rights to 15,000m<sup>3</sup> annually of deciduous timber and the crown reserves the right to an additional 500m<sup>3</sup> per year of deciduous timber.

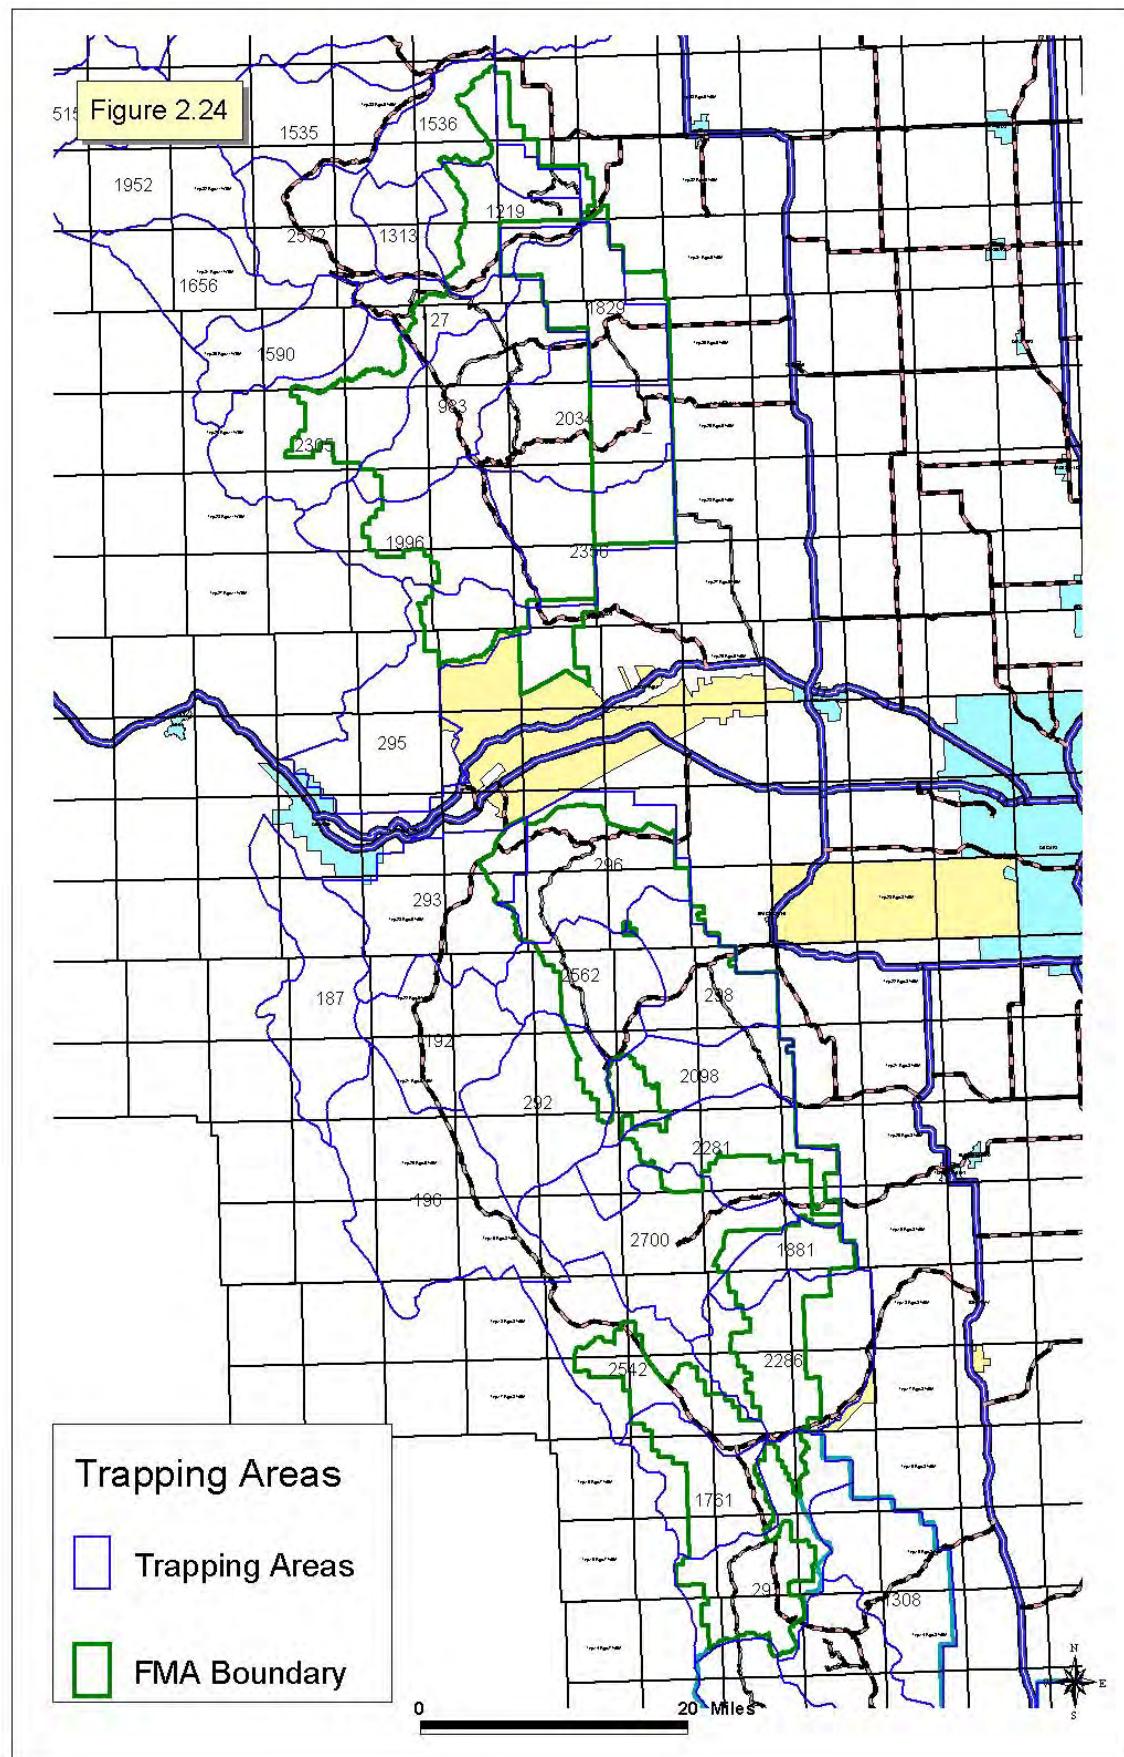

Livestock grazing and fur trapping are historical uses of the FMA/B9 Quota area. The majority of the FMA is covered by Registered Traplines and by some kind of grazing allocation including grazing licences, grazing leases and grazing allotments.

Energy activity is throughout the FMA with on-going exploration and development activities.

Following are small scale maps of the areas of interest of the other industrial users. SLS maintains digital data files that can be viewed and used at larger scales in its operational planning.

**APPENDIX 2.3.**  
**Ecological Attributes of Ecosections mapped in the SLS North FMA.**

Standardized Ecosection	Landform and Topography	Parent Material <sup>1</sup>	Slope (%)	Vegetation Description <sup>2</sup>
B.C1a	Thin residuum and colluvium overlying very steep foothill-ridge topography	X; C	30-70	Closed Aw forest/hairy wild rye; herbaceous grassland (june grass/juniper)
B.F1b	Steeply sloping, V-shaped gullies with narrow floodplains	F	0-100	Closed Sw-Pl forest; closed Sw-Aw forest; closed Pb-Sw forest
B.F2b	Small low gradient streams with narrow floodplains; some meandering channels	F; Q	0-30	Open Aw forest; willow shrubland
B.F2c	Small low gradient streams with narrow floodplains; some meandering channels	F; Q	0-30	Willow or Bd shrubland; Cx; (Pl)
B.F3b	Large foothills or mountain originated rivers with well developed floodplains	F	0-70	Closed Pb-Sw (Sw-Pb) forest; willow shrubland
B.F5a	Small permanent streams with broad organic floodplains and very convoluted stream channels	F	0-5	Willow-Bd shrubland; open Sb forest; fen (Lt)
B.GF2b	Glaciofluvial terraces formed in valley bottoms	GF	0-30	Closed Sw-Pb forest; willow and Bd shrublands
B.GF3a	Flat glaciofluvial outwash plain	GF	0-5	Closed Sw dominated forest/feathermoss/lichen; open Sw-Pb forest/willow/grass
B.L1c	Gently undulating to gently rolling plain	L	0.5-30	Closed Aw-Sw forest; closed
B.L2b	Gently undulating to undulating blankets or glaciolacustrine clay and silt deposits over till	L; M	0.5-30	Closed Aw dominated forest/rose; Willow shrubland
B.L3b	Glaciolacustrine blankets/veeers over till with significant organic deposits	L; Q	2-15	Closed Aw forest; willow- Bd shrublands
B.M2b	Moderately sloped bedrock controlled ground moraine	M	5-70	Closed Aw-Pl forest

**APPENDIX 2.3.**  
**Ecological Attributes of Ecosections mapped in the SLS North FMA.**

Standardized Ecosection	Landform and Topography	Parent Material <sup>1</sup>	Slope (%)	Vegetation Description <sup>2</sup>
B.M3c	Bedrock controlled ground moraine with slight to moderate slopes; generally rolling to inclined	M	6-30	Closed Aw, Aw-Sw or Sw-Aw forest
B.M4a	Bedrock controlled ground moraine; generally undulating to rolling	M; E/M	0-45	Closed PI dominated forest
B.M4c	Bedrock controlled ground moraine; generally undulating to rolling	M; E/M	0-45	Closed or partially closed Aw-PI forest
B.M5b	Morainal and colluvial or residual veneers over bedrock	M; X; C	6-45	Closed Aw forest
B.M7a	Glaciofluvial channels cut in morainal materials	M; GF	6-30	Closed PI dominated forest
B.M8a	Till deposits with significant organic component	M; Q	0-20	Closed PI dominated forest; fens (Bd; Lt); bogs (Sb)
B.M8b	Till deposits with significant organic component	M; Q	0-20	Closed PI-Sw or Sw-PI forest; fens (Bd; Lt); bogs (Sb)
B.M8c	Till deposits with significant organic component	M; Q	0-20	Closed Sw dominated forest; willow shrublands; fens (Bd)
B.Q1b	Depressional to undulating organic	Q	0-5	Bogs (Sb; Sb-W)
B.Q1d	Depressional to undulating organic	Q	0-5	Open deciduous shrub meadows (Bd-Cx; Bd-W; W-Bd)
B.Q2a	Glaciofluvial deposits with significant organic component	Q	0-9	Open deciduous shrub meadows (Bd-W)
C.R1a	Exposed, weathered bedrock on mountain peaks and steep slopes	R	45-100+	Cx dominated grassland
G.C2a	Steeply inclined outwash colluvium	C	45-100	Open deciduous shrubland (juniper)
G.F1b	Steeply sloping, V-shaped gullies with narrow floodplains	F	16-100	Non-vegetated; closed Sw forest; closed PI forest
G.F2c	Small low gradient streams with narrow floodplains; some meandering channels	F; GF	0-10	Willow shrubland; silverberry shrubland

**APPENDIX 2.3.**  
**Ecological Attributes of Ecosections mapped in the SLS North FMA.**

Standardized Ecosection	Landform and Topography	Parent Material <sup>1</sup>	Slope (%)	Vegetation Description <sup>2</sup>
G.F3c	Fluvial terraces and fans	F	0-10	Open Sb forest; willow shrubland
G.GF1a	Glaciofluvial terrace	GF	0-5	Partially closed PI forest
G.GF1b	Glaciofluvial terrace	GF	0-5	Herbaceous grassland
G.M1a	Ground moraine; hummocky to rolling	M; E	5-30	Closed or partially closed PI forest; herbaceous grassland
G.M1c	Ground moraine; hummocky to rolling	M; E	5-30	Partially closed Aw-PI forest
G.M5a	Steep foothills morainal deposits	M; X	16-100	Closed to partially closed PI forest
G.M6a	Shallow organic-ground moraine	Q; M	0-9	Partially closed Aw-PI forest; willow shrubland
G.Q1a	Shallow organic	Q	0-2	Open Bd shrubland; herbaceous grasslands (Cx)
R.C2a	Moderately sloped colluvium	C	0-60	Closed PI forest; open Sw forest
R.C2b	Moderately sloped colluvium	C	0-60	Closed Se-Fa forest
R.C2c	Moderately sloped colluvium	C	0-60	Herbaceous grassland (Cx); willow
R.GF2b	Gently sloping glaciofluvial terrace	GF; F	2-9	Closed PI forest; shrubland (Bd)
R.M1a	Bedrock controlled ground moraine with slight to moderate slopes; hummocky to rolling to inclined	M	2-30	Partially to closed PI forest; closed PI-Se forest; closed PI-Sw forest
S.F1d	Steeply sloping, V-shaped gullies with narrow floodplains	F	0-100	Open deciduous shrubland (W or Bd)
S.F2a	Small low gradient streams with well developed floodplains; meandering channels	F; Q; F/GF	0-9	Closed Sw forest; Deciduous shrubland (Bd)
S.F2c	Small low gradient streams with well developed floodplains; meandering channels	F; Q; F/GF	0-9	Deciduous shrubland (W, W-Bd, W-Cx or Bd-Cx)
S.GF2c	Glaciofluvial terraces	GF	0-10	Herbaceous shrub meadow (W); herbaceous grassland

**APPENDIX 2.3.**  
**Ecological Attributes of Ecosections mapped in the SLS North FMA.**

Standardized Ecosection	Landform and Topography	Parent Material <sup>1</sup>	Slope (%)	Vegetation Description <sup>2</sup>
S.M13a	Moderately sloping morainal material with a fluvial or glaciofluvial component	M; F; F/M; GF	5-45	Closed PI or PI dominated forest; open deciduous shrubland
S.M14b	Gently sloping till with a significant organic component	M; Q; O/M; O	0-20	Closed PI-Sw or Sw-PI forest; bogs (Sb); fens (Bd-Cx or Lt)
S.M1a	Slightly to moderately sloped bedrock controlled ground moraine; generally undulating to rolling	M	0-30	Partially closed to closed PI forest
S.M2a	Moderately sloped bedrock controlled ground moraine; inclined	M	5-60	Closed PI-Sw or Sw-PI forest
S.M3a	Very gently-sloping till plain on an elevated plateau	M	2-5	Closed PI forest
S.M8a	Till and colluvial material on very steep bedrock controlled valley and ridge walls	M; C	31-75	Closed Sw-pl forest
S.M9a	Moderate to steeply sloped foothills with a residual component	M; X	16-100	Partially closed PI forest
S.Q1c	Depressional to undulating organic	Q; F; M	0-9	Open deciduous shrub meadow (fens) (Bd-Cx; Cx-Bd)
S.Q1d	Depressional to undulating organic	Q; F; M	0-9	Open deciduous shrub meadow (fens) (Bd-W; W-Bd)

INFORMATION SOURCE: Geographic Dynamics Corp. 2002. Standardization Between ELC Study Areas for the Sunpine Forest Products Ltd. Regional Area.

<sup>1</sup> Parental Material: Colluvial (C); Eolian (E); Fluvial (F); Glaciofluvial (GF); Lacustrine (L); Morainal (M); Organic (Q); Bedrock (R); Residual (X).

<sup>2</sup> Plant Species: Aspen (Aw); Balsam poplar (Pb); Black spruce (Sb); Engelmann spruce (Se); Lodgepole pine (Pi); Subalpine fir (Fa); Tamarack (Lt); White spruce (Sw); Willow (W); Sedges (Cx); Dwarf Birch (Bd).

### **LAND AREAS OF FOREST COVER TYPES BY AGE CLASS IN THE NORTH AND SOUTH PORTIONS OF SPRAY LAKE FMA**

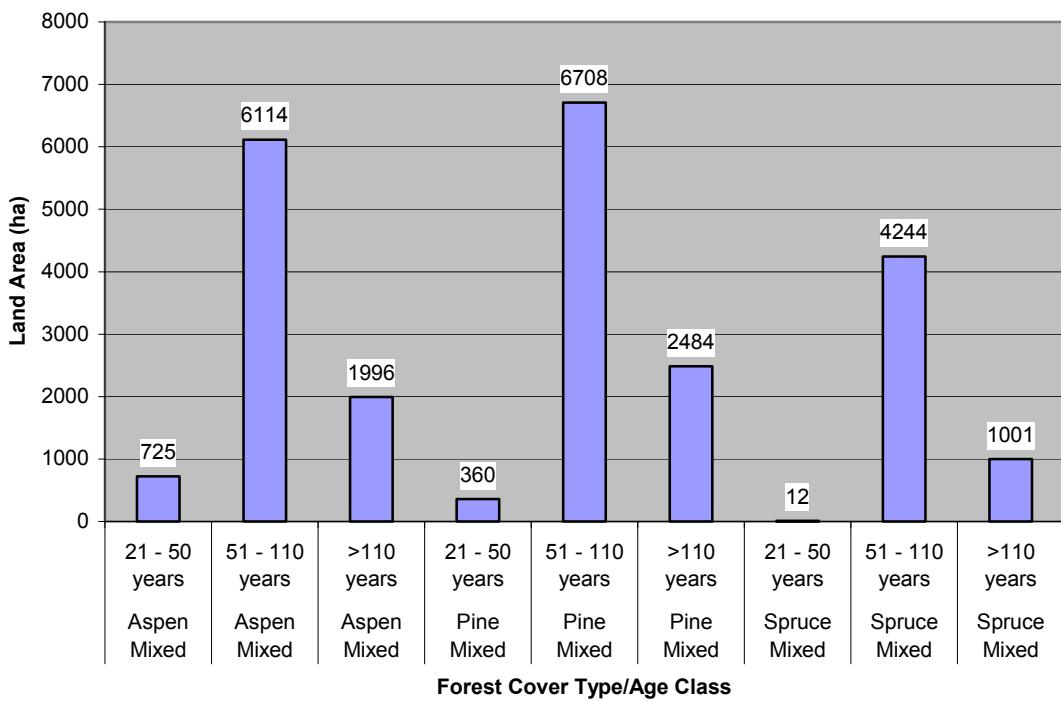

**Area of Deciduous Forest Cover by Age-Class - North FMA**

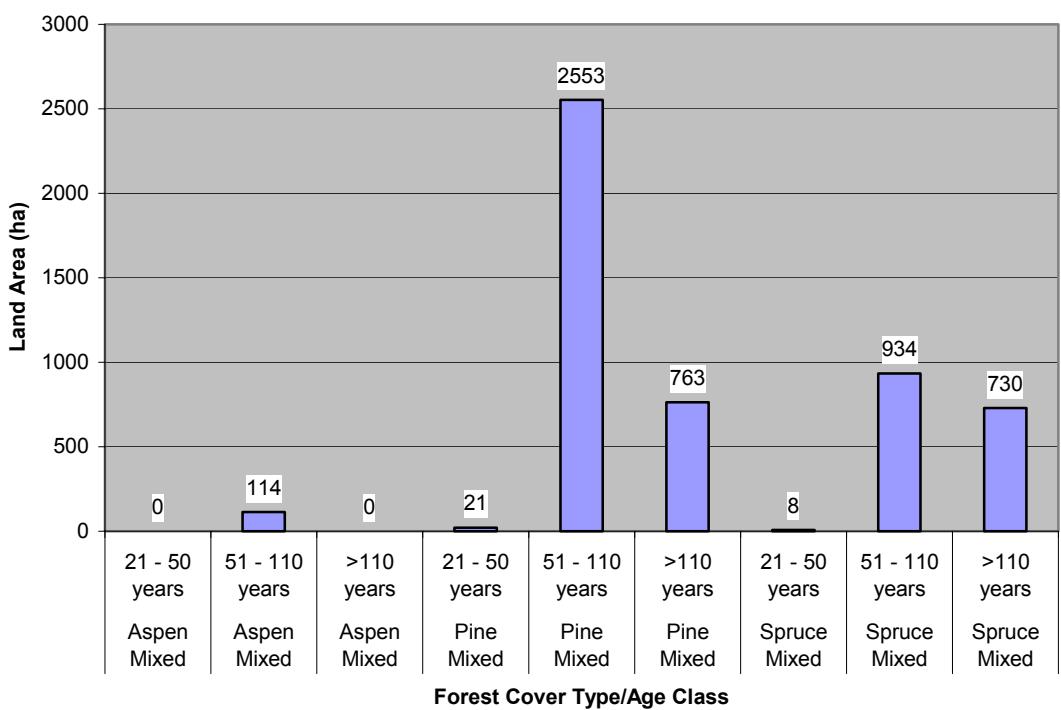

**Area of Deciduous Forest Cover by Age-Class - South FMA**

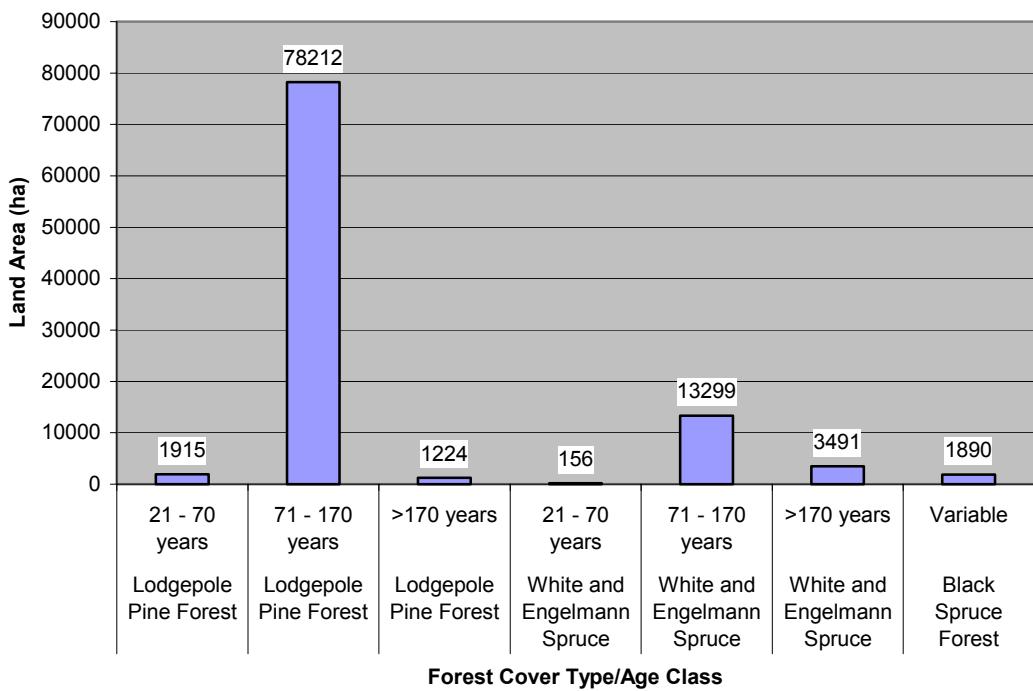

**Area of Mixedwood Forest Cover by Age Class - North FMA**

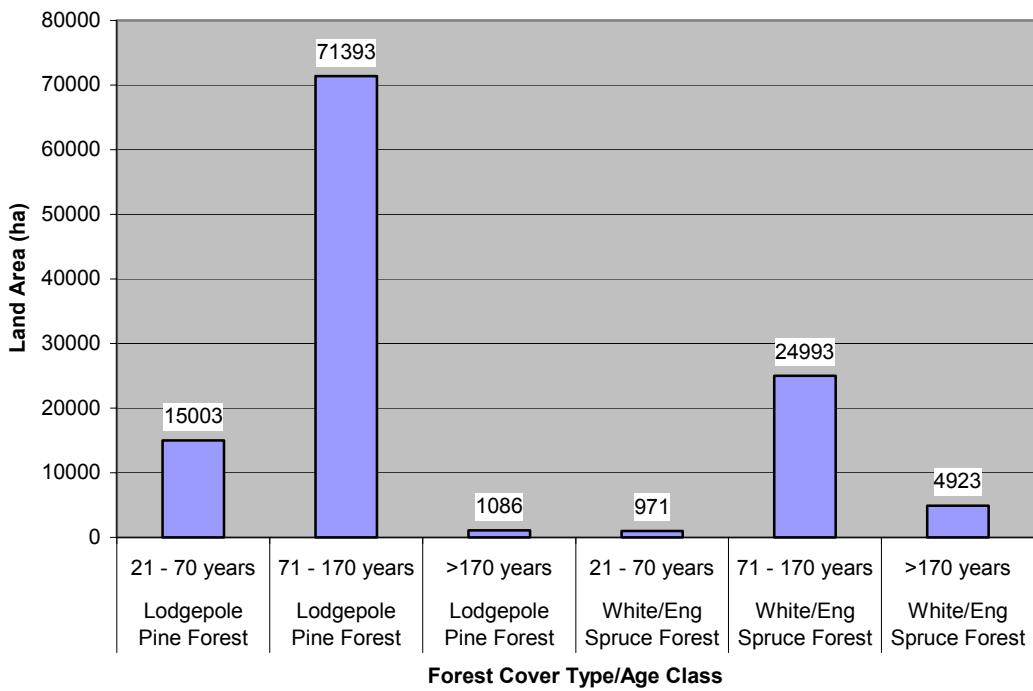

**Area of Mixedwood Forest Cover by Age Class - South FMA**

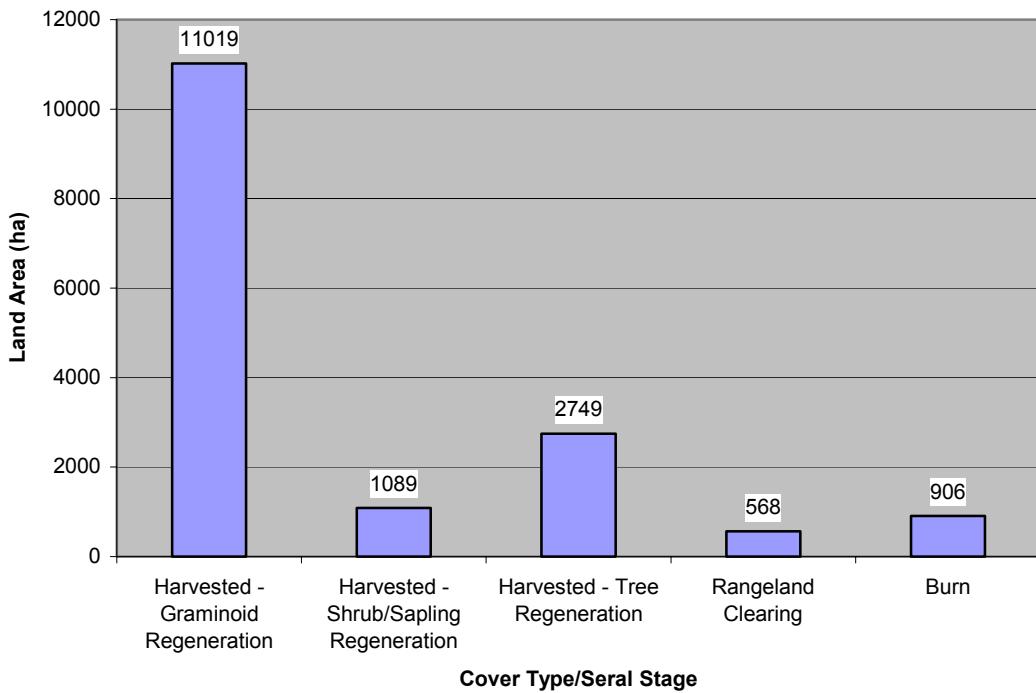

**Area of Coniferous Forest Cover by Age Class - North FMA**

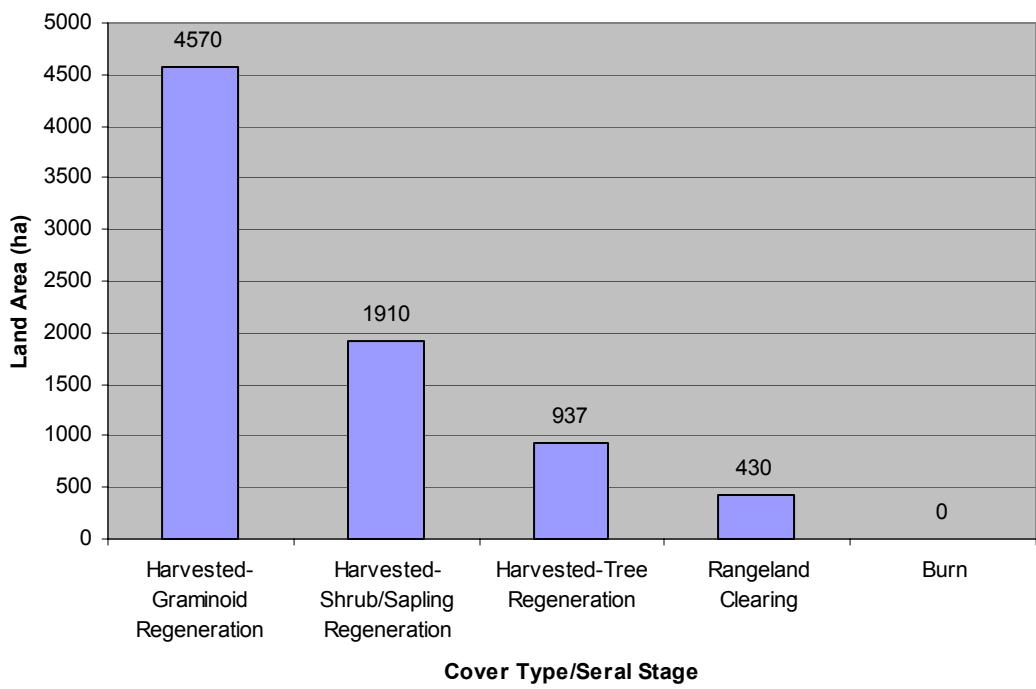

**Area of Lodgepole Pine and Upland Spruce Cover by Age Class - South FMA**

**Area of Harvested, Cleared and Burn Cover - North FMA**

**Area of Harvested, Cleared, Burn Cover - North FMA**

**APPENDIX 2.6a.**  
**Rare Plant Occurrences in the SLS South FMA from ANHIC**

Scientific Name	Rank	Survey Site	Site Description	Elevation (m)		UTM-East	UTM-North
				Min	Max		
<i>Anastrophyllum michauxii</i>	S1	McLean Creek	Moist shaded humus.	0	0	663900	5641000
<i>Riccardia chamedryfolia</i>	S?	SW of Elbow Ranger Station	Rotton log, Picea glauca woods. With Lepidozia reptans, Lophozia porphyroluca, Lophocolea heteophylla, Lophozia ventricosa.	0	0	660950	5638600
<i>Amblyodon dealbatus</i>	S2	Fisher Creek	P. tremuloides-P.glaucia upland area. D. crassicostatus dom. aquatic, with calcareous rich fen mat incld R. pseudopunctatum M., flotoeriana A. palustre D. revolvens pH=8.2 cond=350uS	1480	1480	669100	5632000
<i>Aulacomnium androgynum</i>	S2	Fisher Creek	with Populus tremuloides-Picea glauca upland areas. D. crassicostatis dominant aquatic, with calcareous rich fen mat surrounding lake; mesic mature forest with many rotting logs	1480	1480	669100	5632000
<i>Brachythecium nelsonii</i>	S2	Elbow Ranger Station	on Sphagnum hummock near water line in carr area of wetland community; 4500 ft.	1372	1405	661800	5640900
<i>Brachythecium nelsonii</i>	S2	McLean Creek	side wet hummock, under Betula glandulosa, with grasses, Artemesia, Achillea, Arctostaphylos uva-ursa and Aster	1433	1433	663300	5639100
<i>Brachythecium plumosum</i>	S2	Rocky Mountains	on calcareous and non-calcareous rock cliffs and boulders beside stream in Pinus contorta-Picea engelmannii-Abies lasiocarpa forest	1800	1800	673400	5563000
<i>Brachythecium plumosum</i>	S2	Dry Creek	Picea/(Pinus)/(Abies)-Vaccinium scoparium; soil Brunisol; well drained	2070	2070	674925	5563500
<i>Brachythecium plumosum</i>	S2	Plateau Mountain	Larix/(Picea)/(Abies)-Vaccinium scoparium; soil Brunisol; well drained	2370	2370	673700	5565275
<i>Bryum algovicum</i>	S2	McLean Creek	shaded dwarf willow and birch, hummocky area; wet bank of spring	1448	1448	663100	5637150
<i>Bryum algovicum</i>	S2	Elbow River	near spring in exposed outcrop of Blairmore Foundation (sandstone), southern exposure, White spruce type	1433	1433	659475	5636950
<i>Bryum algovicum</i>	S2	Highwood River Road	spruce-aspen woods; wet soil on limestone rock	1695	1695	671600	5586325
<i>Bryum algovicum</i>	S2	McLean Creek	at base of shrub, in aspen stand on slope; growing on woody soil	1433	1433	663900	5641000
<i>Bryum turbinatum</i>	SU	Elbow Ranger Station		1400	1460	661800	5640900
<i>Campylium polygamum</i>	S3	Elbow Ranger Station	in wetland community; on humus at base of mature aspen; 4500 ft.	1372	1405	661800	5640900
<i>Campylium polygamum</i>	S3	McLean Creek	growing with Abietinella abietinella in shale region on W side of creek, shaded by white spruce; on dead wood	1433	1433	663300	5639100
<i>Campylium polygamum</i>	S3	Elbow River	along N edge of river, ravine type habitat, localized bedrock exposures (Blairmore Formation: SS-shale), White Spruce river site; dry, sandy soil; 4700 ft.	1430	1430	659475	5636950
<i>Cirriphyllum cirrosum</i>	S2	Kananaskis Area	on soil and rock of calcareous escarpment. Pseudotsuga-Abies lasiocarpa scattered on ledges. T. abietinum-Hylocomium-T. tortuosa-O. jamesianum-Barbula abundant	1570	1760	637250	5653300
<i>Cirriphyllum cirrosum</i>	S2	Moose Mountain	springy place, 60 degree east-facing talus slope; 7890 ft.	2315	2315	652500	5645250
<i>Cirriphyllum cirrosum</i>	S2	Sibbald Flat	steep, shaded, seeping, north-facing limestone outcrop	1478	1478	650100	5655550
<i>Cirriphyllum cirrosum</i>	S2	Canyon Creek	beside rivulet; on wet rocks	1735	1735	645650	5641700
<i>Cynodontium tenellum</i>	S2S3	McLean Creek	open area in poplar-willow stand; on dry exposed limestone rock	1448	1448	663100	5637150
